

Introducing a totally new concept in Reef Nutrition!

aquaLife® Reef Cafe

Now your customers can customize and vary their reef diets with our unique Reef Cafe "shots."

Reef Cafe shots are specially blended with fresher, whole ingredients. Economical and environmentally friendly, Reef Cafe customers return again and for refills!

• **Reef Café Brew Base** - A solution of inorganic ions, micronutrients and stabilizers used for mixing and dispensing the other three components. **AL820B** 1gal

• **Reef Café Amino Shot** - A shelf-stable concentrate formulated from four purified L-amino acids known to be preferentially absorbed by corals. Fortified with vitamin C and simple sugars, Amino Shot helps enhance coral coloration, enhances tissue regeneration and aids in the metabolic elimination of phosphate and nitrate from the aquarium. **AL821B** 32oz

• **Reef Café Phyto-Frappe** - Concentrated, shelf-stable phytoplankton food including whole cells and cell fragments of Spirulina and Chlorella algae, both carefully cultured and processed to retain maximum nutritional value. **AL822B** 32oz

• **Reef Café Zoo-ka Moka** - A zooplankton food consisting of whole freeze dried copepods and processed copepod products in concentrated form in a shelf-stable liquid. **AL823B** 32oz

BREW BASE

A solution of inorganic ions, micronutrients and stabilizers used for mixing and dispensing Amino Shot, Phyto-Frappe, and ZOO-KA-MOKA.

AMINO SHOT

Purified L-amino acids fortified with vitamin C and simple sugars. Enhances coral coloration, tissue generation and aids in elimination of phosphate and nitrate

PHYTO-FRAPPE

Concentrated phytoplankton with whole cells and cell fragments of Spirulina and Chlorella algae.

ZOO-KA-MOKA

A zooplankton food consisting of whole copepods and processed copepod products.
