

# Water Temperature is the Key to Maintaining Your Pond

Use this thermometer to assist in maintaining your pond

**65°F & Above**  
If you're not using an ASF food, switch to Staple Pellets.

**60°F**  
Begin fertilizing plants monthly with Fertilizer Tablets. (TWG2714)

**55°F**  
Add submerged, oxygenating plants such as cabomba & anacharis

**50°F**  
Begin feeding fish wheat germ, if you aren't feeding an ASF food.

**42°-70°F**  
Use Water Garden Cleaner ASF weekly to breakdown debris. (AL8341)

**Above 85°F**  
Maintain excellent circulation to provide necessary oxygen.

**65°F**  
Introduce tropical plants to your pond.

**55°F & Above**  
Re-pot & fertilize existing plants, moving them to proper positions.

**50°F**  
Use a barley product, such as 2-in-1 Barley Straw Extract to prevent string algae. (AL8328)

**45°F**  
Start pumps and filters, remove de-icers. Begin testing pond water.
