

EVOKE

“A fresh breath of carbon dioxide for aquatic plants”

This product evokes the best performance from your planted aquarium by allowing plants access to a sufficient amount of carbon dioxide for luxurious growth, even in aquariums without a carbon dioxide injection system. AquaLife EVOKE has been carefully formulated from the highest purity ingredients to deliver safe, reliable results in low-tech planted tanks.

DIRECTIONS: One teaspoon (5.0 ml) of EVOKE treats 25 gallons (100 L). Do not exceed this dosage and add only one dose per day. Observe plant reaction and adjust dosage as necessary.

IMPORTANT: Aquatic plant growth is dependent upon the correct amounts of light, carbon dioxide and mineral nutrients. If any of these is inadequate, plants will grow slowly or not at all.

Every aquarium is different. Evaluate the effect on plant growth for two weeks, then decide if dosage should be adjusted.

Caution: This product is an inhalation hazard. Use in a well ventilated area. For aquarium use only. Keep out of reach of children.

LUSH

Concentrated Plant Food

LUSH is formulated to maximize plant growth and to provide nutrients for new tanks, as well as established, heavily-planted tanks. AquaLife LUSH concentrated freshwater plant food contains all the essential nutrients for your aquatic plants.

We developed LUSH after months of research comparing various aquarium plant food products and their performance. AquaLife LUSH has been shown to be the best choice for maintaining a wide variety of freshwater plants for the long term.

N-P-K = .15—0.04—.45

DIRECTIONS: This product is intended for use only in freshwater planted tanks, to give new transplants a boost. Do not use at full dosage when fish are present. Product contains copper and is toxic to shrimp.

DO NOT USE IN TANKS WITH SHRIMP!

For established planted tanks with fish: Reduce dosage to 2 ml (one pump) per 8 gallons weekly, following a water change. Evaluate the effect on plant growth for two weeks, then decide if dosage should be adjusted.

PHYTO-TONE

Aquarium Plant Maintenance Food

Formulated to give established freshwater planted aquariums everything plants need to thrive, AquaLife Phyto-Tone low dose freshwater plant food contains all the essential nutrients for your aquatic plants, with no heavy metals that might be harmful to fish or shrimps.

We developed Phyto-Tone after months of research comparing various aquarium plant food products and their performance. AquaLife Phyto-Tone has been shown to be the best choice for maintaining a wide variety of freshwater plants for the long term.

N-P-K = .02—0.002—.02

DIRECTIONS: This product is intended for use only in established freshwater planted tanks, to maintain the growth of aquatic plants. May be used at full dosage when fish or shrimps are present. Product does not contain copper and is non-toxic to shrimp.

For established aquariums: Add 2 ml (one pump) per 8 gallons daily. We recommend a 50% weekly water change. For smaller aquariums, the dosage is equivalent to one drop per gallon. Aquariums can be dosed this way indefinitely. Plants should be well-established and growing before fish are introduced. This will normally take about one month from transplanting.
