

Mr Aqua Turbo Diffuser 200/400/600

- Provides more efficient diffusion of CO₂ than conventional methods.
- Aquarium Size: Turbo Diffuser 200 - up to 50 gallons; Turbo Diffuser 400 - up to 100 gallons; Turbo Diffuser 600 - up to 150 gallons.
- The venturi system on the pump breaks the CO₂ into smaller bubbles, making it more easily dissolved in the water and accessible to plants.
- High water flow into this diffuser allows more water to contact the CO₂ molecules, and thus more efficient diffusion of CO₂ into the water.
- Since this diffuser is not gravity dependent, it can be placed at any location in the aquarium. That makes it easy to hide the unit out of sight.

Instructions:

1. Connect CO₂ tubing (not included) from your CO₂ source to back of diffuser.
2. Place diffuser into the lower 2/3 of aquarium.
3. Open the CO₂ valve, and enjoy your planted aquarium!
