

<b>WATERFALL WIDTHS AND FLOW RATES</b> <b>Minimum flow rates required to give:</b>		
	<b>A thin 1/4" layer of water over a smooth lip</b>	<b>A bold 1" film of water over a waterfall lip</b>
<b>4" lip</b>	200gph	400gph
<b>6" lip</b>	300gph	600gph
<b>10" lip</b>	700gph	1200gph
<b>16" lip</b>	1300gph	2100gph
<b>24" lip</b>	3000gph	4000gph

Note: Head pressure and elevation must be taken into account for accurate flow rate.
