Mini pre-set heaters are configured at 25 °C (77 °F) to ensure an ideal temperature in small aquariums. The new JOLLY PRESET is unbreakable thanks to a plastic shell. They are compact with minimum space requirements, practical, precise, and reliable because the temperature is pre-set and regulated by an integrated circuit.

Available in multiple wattages for multiple small aquarium sizes, the JOLLY PRESET is an ideal heater for Betta fish, Neon fish, turtles, and amphibians.
